

THE COCKPIT FOR PROCUREMENT & IT SOURCING

Your IT budget *is leaking money.*

In two places nobody sees, until someone does the math: contracts that quietly renew and licenses nobody uses anymore. CommsOS makes both visible. All in one portal.

Example view, sample data. Your real numbers come from your own contracts.

1

Everything on the table

Contracts, licenses and usage in one place — software, hardware, invoices.

2

The two leaks, quantified

What keeps running unnegotiated and what runs unused — quantified, not estimated.

3

Money back in the budget

Renegotiate, return what's unused. Every saving stays documented.
